# Pravega.

## Placements don’t run on claims.

Ours run on evidence — visible, explainable, auditable.

Agentic placement intelligence — live prototype: evidence-gated skills, closed-loop learning paths, human-approved AI.

Live URL + GitHub: being wired for Round-1 judging

# 56.35%

## of graduates are “employable” — and no employer can tell you which.

### THE NUMBERS WE STOOD ON

**54.81% → 56.35%**
YoY employability (Wheebox ISR 2026; PIB July 2026 records the same trend: 46% in 2020 → 56.4%)

**11.2%**
graduate unemployment — ≈3× national rate (Raysolute analysis of PLFS 2025)

**Match ≠ volume**
employers can’t shortlist from paper claims; skill mismatch is the binding cost, not degree count

### THE COST OF CLAIMS — today

**Placements on gut**
T&P filters × spreadsheets; no version, no appeal, no audit

**Evidence orphaned**
GitHub & tests exist but never become trusted skill state

**Training reacts, not predicts**
cohort weakness known only after a failed drive

**NAAC outcomes compiled by hand**
numbers live in Excel; nothing traces to an action

Sources: Wheebox India Skills Report 2026 (PDF, wheebox.com) · PIB “Empowering India’s Skill Ecosystem” (Jul 2026) · Raysolute analysis of PLFS 2025 · PS pages 13–18 (40% JDs ask Docker vs 10% batch has it).

# Every tool digitises the queue — none verifies the person.

| CAPABILITY | SUPERSET | TCS iON | LINEUPX | PRAVEGA |
|---|---|---|---|---|
| **Campus logistics — post, apply, schedule** | yes | partial | yes | **yes** |
| **Evidence-gated skills from real work** | — | — | — | **yes** |
| **Explainable eligibility, versioned rules** | — | — | — | **yes** |
| **AI proposes, human approves/overrides** | — | — | — | **yes** |
| **Append-only audit for NAAC/NIRF** | — | — | — | **yes** |
| **Every action questioned — appeal path** | — | — | — | **yes** |

**The missing middle: evidence-gated skills with governance rails — nobody ships this today.**

Product pages + Superset's own claim: teams "manually track student eligibility" (joinsuperset.com, verified 2026-11) · TCS iON NQT = a point-in-time exam, not a live trust layer · LineupX adds AI mocks, not evidence-gated states.

# Pravega turns claims into evidence — with a human always on the final switch.

## I Evidence over claims

— GitHub repo scan — language bytes, commit cadence, tests present

— Claimed → Verified flip with expiry tracked

— Every flip cites its evidence chain — nothing magic

parts: ledger · analyzer

## II The number moves

— Mock drive → weak SQL flagged → AI assigns path

— Tasks produce evidence — artifact closes the gap

— Retest delta shows the growth, not the vibes

parts: gap engine · path builder

## III AI helps, human decides

— Agents draft: interview set, eligibility sweep, schedule

— Officer approves or overrides — reason mandatory

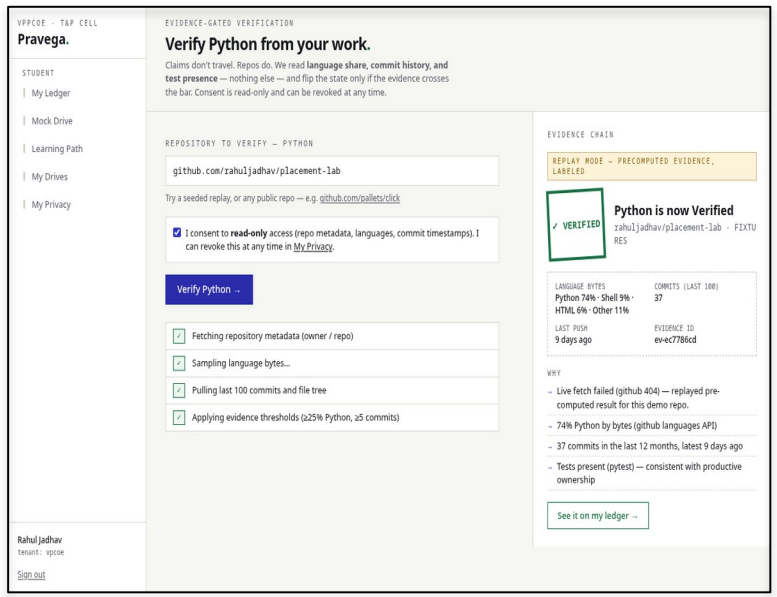

— Every action → append-only audit; fairness parity scan

parts: agent runs · audit log

**One profile · one trail · every decision explained — PS pillar: Evidence-Based Competency Profiling, Skill-Gap Bridging, Agentic Placement, Governance.**

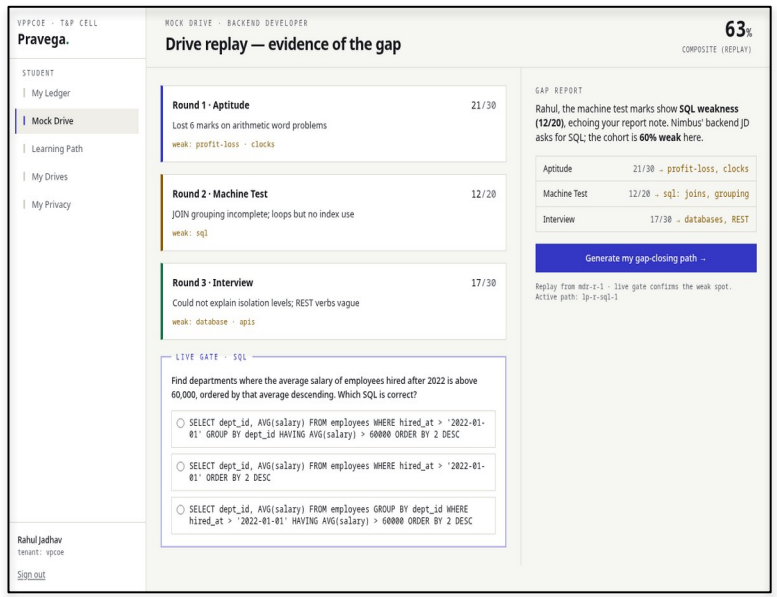

# This is not a mock.

Every screen exists — and the demo replays labeled proof.

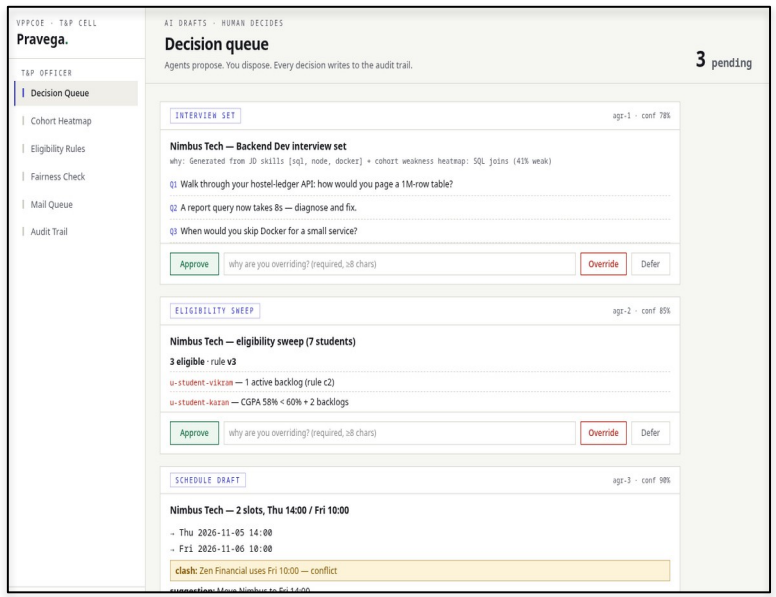

### I — ACT I — claim flips to Verified

Language bytes 74% Python · 37 commits · tests found · evidence chain logged

### II — ACT II — gap named, gate passed

Aptitude 21/30 · Machine 12/20 · Interview 17/30 — SQL weakness flagged, live SQL gate PASS

### III — ACT III — proposals, human decides

Interview set drafted · eligibility sweep blocked 2 (rule v3) · schedule clash flagged

Live on a public URL — judges click, data is sealed demo data. Fixtures-replay is labeled on screen; never silent.

# Honest pipeline.

Everything traces. Nothing improvises when nobody's watching.

## STACK — BORING, PROVEN

Next.js 16 · React 19 · TypeScript · Tailwind v4 · Drizzle ORM · Postgres · Supabase · Playwright · 3/3 · GitHub REST

**CLEVER, NOT MAGIC**

Analyzers are ports/adapters — swap fixtures ↔ live GitHub with zero changes above the ledger. Labeled fallback, never silent.

Multi-tenancy by design: tenant_id on every table · PS explicitly allows rule-based AI — we ship both, and we say which is which.

# ₹0 infrastructure.

Real software. Nothing experimental on the critical path.

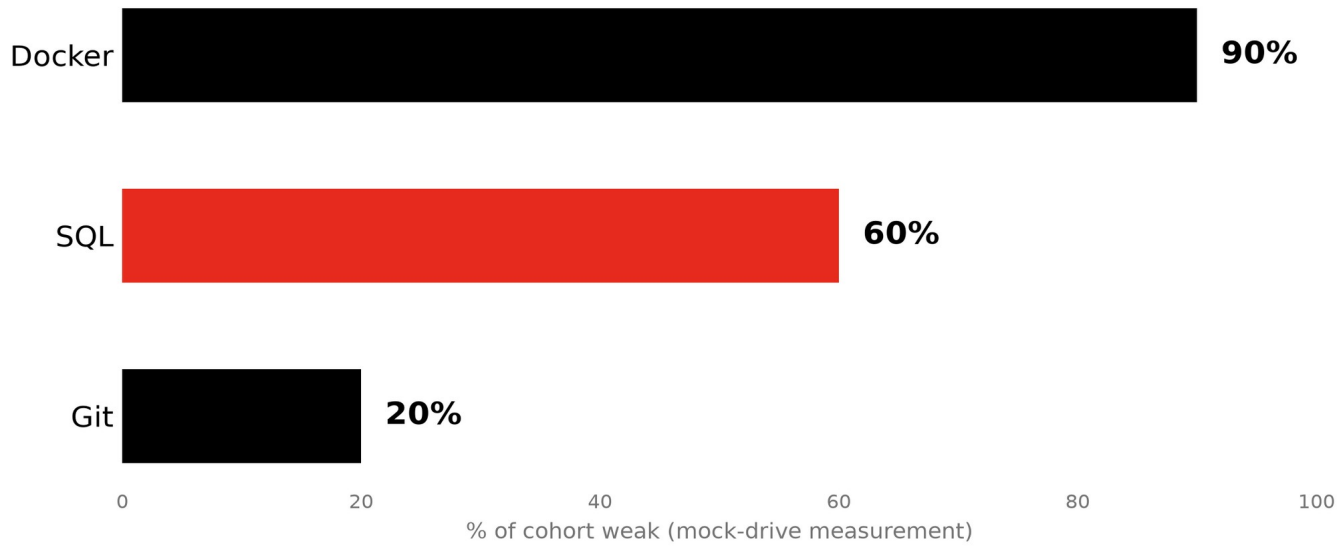

| WHAT BREAKS | WHAT WE DO |
|---|---|
| **Venue network dies** | Labeled fixtures replay + recorded 90-second video — demo never freezes |
| **GitHub API rate-limits / 404** | GITHUB_TOKEN support; the demo repo 404 now — replay carries, honestly labeled |
| **“AI could hallucinate” critique** | No LLM on the critical path — deterministic rules + human gate; confidence shown |
| **“Students won’t connect repos”** | Consent is explicit & revocable; non-repo evidence accepted (labs, contests, certs) |
| **Judges break the demo link** | Demo-mode reset button (officer-only, 1/min) — factory reseed in seconds |
| **Scale beyond one college** | tenant_id on every row; NAAC export is one CSV; PS multi-tenant path intact |

Cost: ₹0 infra (free tiers) · build: 1 engineer · 36 hours · demo seed: 7 realistic students, full evidence chains.

# +8–15 pp

**placement-rate hypothesis for a pilot batch — measured, not vibes.**

WHERE THE COHORT IS HURTING — measured from mock drives

n=7 demo cohort (measured). Will be replaced by batch-1 pilot numbers — not presented as findings.

WHAT MOVES

**SQL competency**
Workshop gates the Nimbus sweep re-run — pass rate tracked before drive

**NAAC/NIRF evidence**
One click: outcomes CSV export — same rows as the heatmap; nothing compiled by hand

**Recruiter minutes**
Verified-only search; “why this match” reason codes; manual shortlisting collapses

**Growth loop**
Weakness → path → artifact → retest — measured pre/post, written to audit

Hypothesis range from cohort deltas in seeded data; pilot will publish real pre/post numbers. No efficacy claim beyond what the batch proves.

# One college pilots it.

The network scales it — on evidence, not on hope.

Why Open Badges: credentials that outlive the server — verifiable by any standards-aware employer (1EdTech, 2023).

# Shortlist us.

1 **Select Pravega for the offline build — 23–24 January 2027.**

2 **Judges click the URL — live, sealed demo data, every claim checkable.**

3 **We return a measured pilot by March: pre/post SQL scores + placement delta.**

## One case.

## One trail. Full visibility.
